# Create a local development database for the Rest Rant deploy lesson
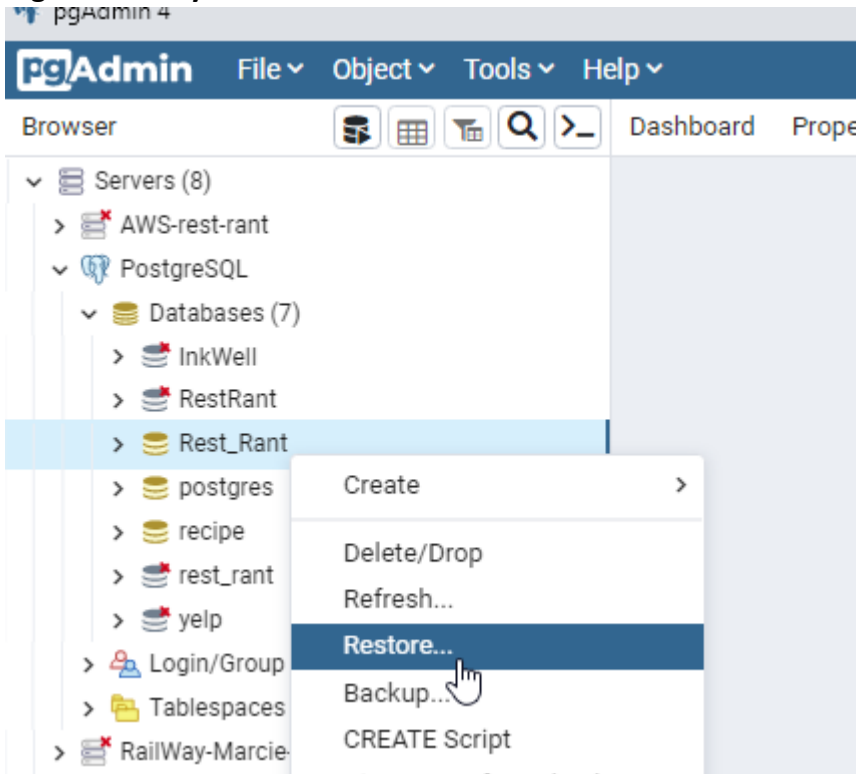

1. **Open your local PGADMIN tool**

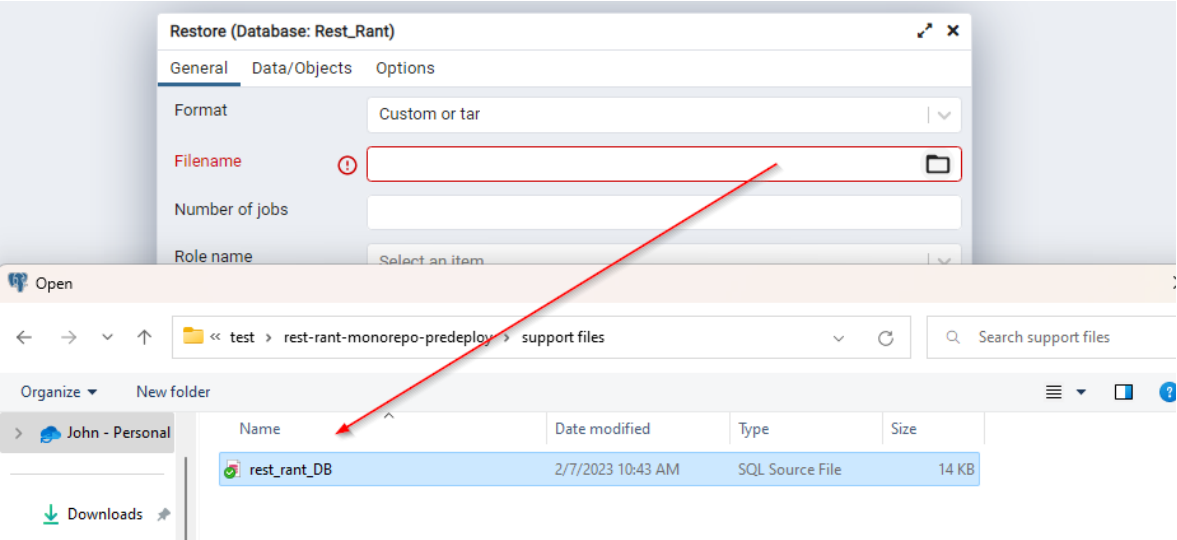

2. **Choose "create a database" under the default PostgresSQL server name it Rest_Rant**

3. **Right click on your new database in the tree and select "Restore"**
4. **Browse to the path of the rest_rant DB backup which was included in the support files folder in the repo**

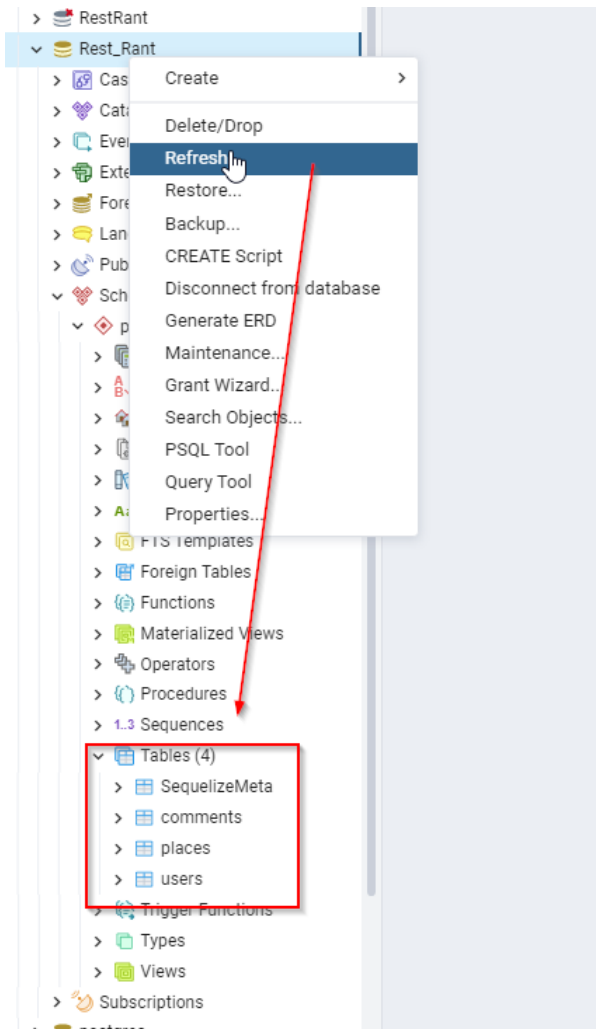

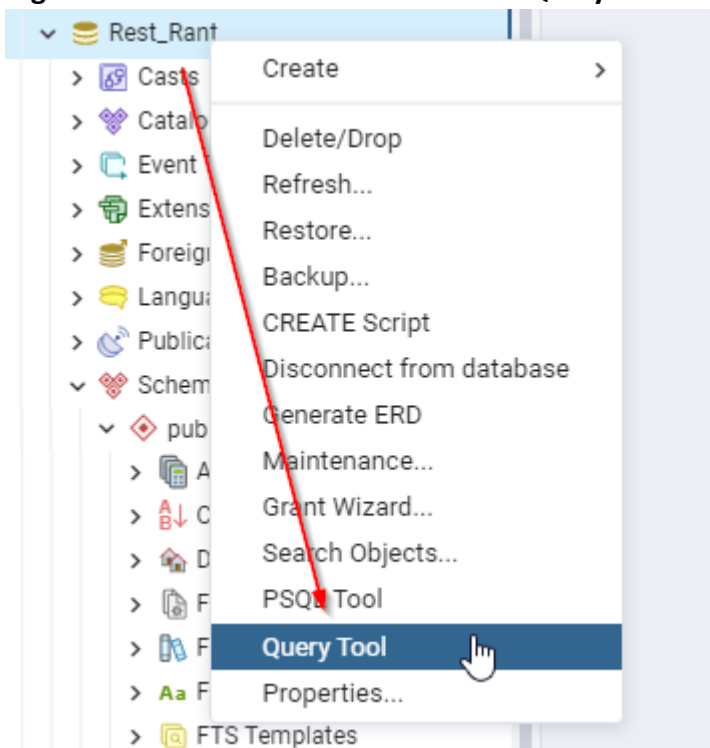

5. **Select Restore**

6. **You may see this error but don't worry**

7. **Right click on the new database you created and select "refresh". You should now see the rest_rant tables in the schema**

8. **Right click on the database and select "Query Tool"**

9. Run the following query and you should now see test data ready to use in your app.

```
1  select * from places
```

	place_id [PK] integer	name character varying (255)	city character varying	state character varying (255)	cuisines character varying (255)	pic character varying (255)	founded integer	created_at timestamp with time zone
